

Renal

C 3 West | Gold Coast University Hospital

The renal ward, C3 West, is a 24 bed inpatient unit caring for a range of complex acute and chronic renal conditions, providing pre-dialysis care, peritoneal dialysis, education and community support. We manage medical and surgical clients who have pre-existing renal conditions and we also provide high quality, patient focused care to those with end stage renal disease, requiring haemo and/or peritoneal renal replacement therapy, post-transplant, or renal supportive care. We also provide acute dialysis to inpatients and emergency presentations as required.

Educational Resources

- Nurse educator
- Clinical facilitator
- Orientation program
