

The Vascular and Medical Unit (VAMU) is a 28 inpatient unit providing specialist care for adult patients with a wide range of vascular and medical conditions. This includes pre and post-operative care from vascular surgery, diabetes management, wound care and general medical patients requiring cardiac monitoring.

Our team of doctors, nurses, pharmacists and allied professionals work closely within Gold Coast Health to provide the highest quality of care. VAMU collaborates with specialist teams such as vascular specialist, endocrinologist, general medicine teams, diagnostic testing and operating theatres from the initial assessment of the patient journey through to discharge planning for continuation of care utilising GEMITH and community services.

Learning Opportunities
